DETAILED ACTION

Double Patenting

1. Applicant is advised that should claim 2 be found allowable, claim 7 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5,8,10,13-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Yang (US Patent 6390054). This reference teaches transitioning between two types of engine fuel injection modes. During transitioning some of the cylinders operate in a first mode while others are switched to the second mode. Eventually, all the cylinders are switched to the second mode. See col. 4, lines 35+ and also col. 6, lines 6-17.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 6,9,11,12 and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang. Yang applies as above, but does not teach applying the technique of transitioning between different injection modes wherein one of the two combustion modes includes two injections (shots) per combustion cycle, nor use is a rotary type engine. As is known by applicant (see background discussion in applicant's specification) the use of multiple injections per engine cycle is well known. It would have been obvious to one of ordinary skill in the art to have modified a known multiple injection per cycle engine to have transitioned to single injection mode by using the

technique taught by Yang wherein the cylinders or cylinder groups were progressively switched from one mode to the other, because this would have reduce torque shocks. Furthermore, it would have been obvious to apply the technique to a known rotary engine for the same reasons of minimizing torque shocks when transitioning between injection modes.
